Silestone Natural Quartz Countertop Expectation Sheet

Color Consistency

Silestone Natural Quartz® is made from natural quartz. As a result, variation in quartz color, shade, pattern and size are unique traits to be expected with Silestone Natural Quartz. Additionally, small blotches or random distribution of particulates are an inherent part of the overall design and composition of the product and are not considered to be defects. The Silestone Natural Quartz 15 Year Transferable Warranty does not cover color variance and Silestone Natural Quartz installation will not be replaced for these unique, inherent traits.

Warranty

Silestone Natural Quartz is a surface that is made out of quartz, one of the strongest minerals on earth. While Silestone Natural Quartz is not indestructible, it does provide superior performance qualities over other natural stones. Its built-in antimicrobial properties provide an unprecedented advantage over any other material in the market today. Cosentino, S.A. warrants to the residential owner-occupants of installed Silestone Natural Quartz for a period of fifteen (15) years from the date of installation that the Silestone material will be free from manufacturing defects. Visit <http://lowes.silestone.com/customer-service/quartz-warranty/> for additional warranty details.

Silestone Natural Quartz Program Stainless Steel Sink Care & Maintenance

Silestone Natural Quartz stainless steel sinks are made from the highest quality 18-gauge alloy stainless steel with an 18/8 chrome/nickel content. Each sink comes with a satin finish and sound deadening undercoating.

For General Care and Cleaning

- After each use rinse thoroughly. To minimize deposits or water spotting simply wipe sinks dry with a clean soft cloth.
- Avoid any abrasive cleaners such as steel wool or scrub pads, as this will dull the finish.
- Avoid having household cleaning agents sit in the sink (such as bleach) as this may dull the finish.
- Stainless steel does not rust; however use of appropriate stainless steel sink cleaning agents is recommended for removing various surface residues.
- Scratches are normal in any sink material. With regards to stainless steel, most minor scratches can be softened with Soft Scrub, a Scotch Brite pad and deep cleaning agents such as Comet. Gently rub across the entire surface and rinse thoroughly.

By signing below, I, _____ (please print) have reviewed the above considerations and expectations of my Silestone Natural Quartz countertop and installation. I understand that not following the above considerations may result in a delay in the installation of the countertops and possibly result in additional charges.
